

**TECHNICAL SPECIFICATIONS**

# **SOFTLINE SHELVING SYSTEM**

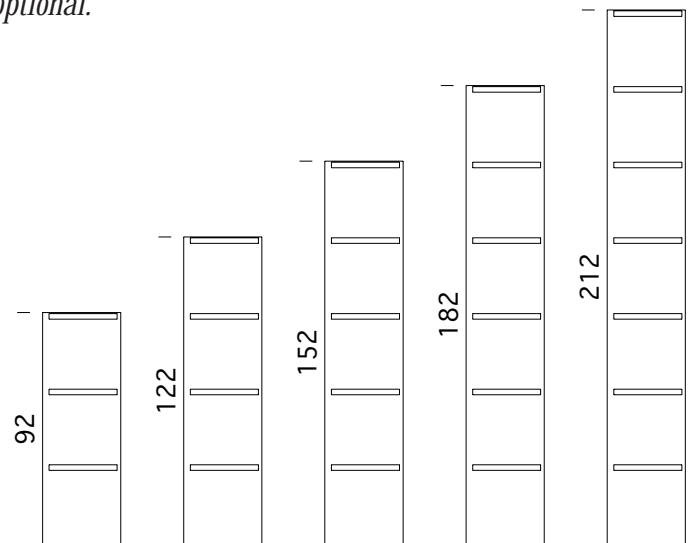

# Softline shelving system

The Softline shelving system, founded in the early 1980's, is flexible and contains many possibilities. It is a starter/add-on system that offers a large selection of standard components specialized for libraries. We are continuously developing new components for this shelving system to meet the demands of modern libraries. The shelving system comes in 5 standard heights, 2 standard widths and 3 shelf depths and as single- or double- sided units. Shelving bays of different heights can be connected; except for height 92 cm. Softline indicates that the upright panel has an ellipse shaped front strip. The upright panels are veneered as standard, which can be stained in a number of colours. The upright panels can also be painted. Softline come with steel shelves with a loose acrylic backstop and rail for hanging book support as standard, but other types of metal shelves and also wooden shelves are optional.

## HEIGHTS

The panels come in five heights;  
92, 122, 152, 182 and 212 cm.  
Heights include adjustable feet (2 cm).  
The shelves are adjustable in 2,5 cm increments.

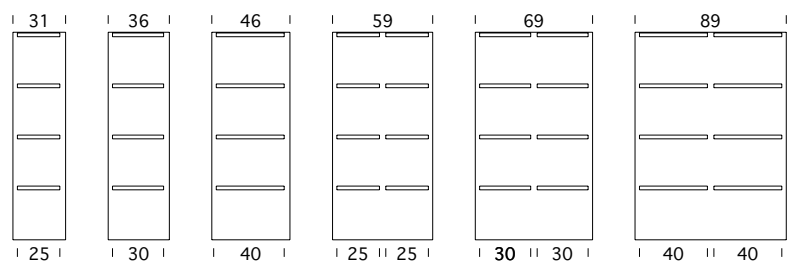

## DEPTHS

The frames come in six depths;  
31 cm for 25 cm deep shelves,  
36 cm for 30 cm deep shelves,  
46 cm for 40 cm deep shelves,  
59 cm for 2x25 cm deep shelves,  
69 cm for 2x30 cm deep shelves,  
89 cm for 2x40 cm deep shelves

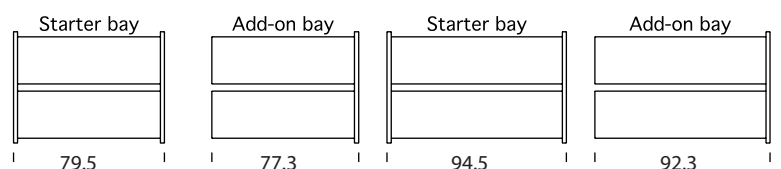

Upright panel depth

Steel shelf depth

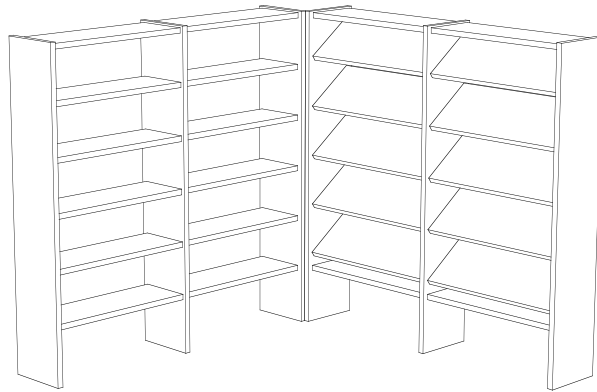

## WIDTHS

The bays are available in starter and add-on bays. A Starter bay has two outside panels while an add-on bay has one middle panel.

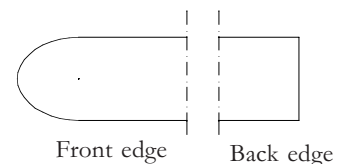

# Softline shelving system

## THE UPRIGHT PANELS

are made of 21 mm thick particleboard of category 1 according to the Swedish standard. The particleboard has a density of 610 kgs per cubic meter and the content of formaldehyde shall not exceed 100 grams dry substance. The particleboard is banded on front vertical edges with a 25 mm thick, super ellipse shaped strip of solid wood. The back edge is banded with a 4 mm flat strip of solid wood. The horizontal edges are banded with a 4 mm flat strip of solid wood. The upright panels are surfaced with 0,6 - 0,8 mm thick wood veneer. One side of each upright panel and both sides of each intermediate panel have rows of 5 mm diameter holes for shelf brackets allowing placement in 25 mm increments. The upright panels have two holes in the bottom for adjustable feet that add 20 mm to the panel height.

Detail of Softline upright panel

25 mm superelliptical front edge,  
solid beech

4 mm back strip, solid beech

## THE METAL SHELVES

are made of 20-gauge (0,9 mm) sheet steel. The shelves are epoxy painted with a paint thickness of 60 my. The flat steel shelves have a 25 mm high front edge. The sloping steel shelves are bent in a way so they have a stopper to prevent magazines from sliding off. Ordinary flat shelves are 25, 30 and 40 cm deep.

## THE WOOD SHELVES

are made of 21 mm thick lumber core blockboard. The front and back edges are banded with 4 mm thick strips of solid wood. The shelves are surfaced with 0,6-0,8 mm thick wood veneer. The top wood shelves are made of particleboard, so are the writing surfaces, the pull-out shelves and the corner shelves.

## THE METAL FRAMES

are made of 30x20x1,5 mm steel tubes, epoxy painted with a thickness of 60 my.

## THE KICKPLATES

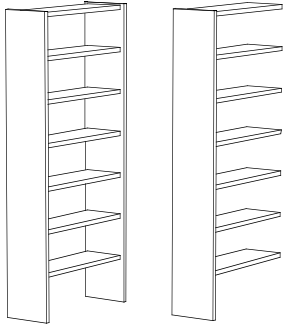

are made of 16 mm thick particleboard. The kickplates are surfaced with 0,6 - 0,8 mm thick wood veneer.

## THE FULL BACKS

are made of 16 mm thick particleboard. They are surfaced with either 0,6 - 0,8 mm thick wood veneer or laminate. The horizontal edges are banded. The vertical edges are not banded, nor are they exposed after assembly of the back panel.
