MEZITTA

COMPUTER AND STUDY TABLE

DESIGN CARSTEN NIKOLAJ BECKER

Creative solutions with the Mezitta computer and study table.

Mezitta is designed specifically for public access terminals and individual computer workstations. It is a multifunctional table that can be combined in several solutions to fit the designated work area.

The height adjustability allows for work space in several heights - to suit both adults and children - or for standing and seated work stations.

A wire management channel has been integrated into the extruded aluminium profile of the tower and is an elegant design feature of the Mezitta.

The modular system is produced primarily from extruded aluminium profiles creating a central tower.

The overall height of the tower is 133 cm. The table top has a depth of 75 cm and a width of 130 cm, with the flexibility of a non-incremental sliding height adjustment from 50 cm high to 120 cm high. A tool is required to adjust the height accordingly.
