

Index

Design: Björn Dahlström

F R E E D O M O F M I N D

A blank sheet of paper is to the author, as Index shelving system is to you.

Björn Dahlström has designed an unusually clever frame and once it's in your hands, the sky is the limit.

Even with a small series you can create your own look with the end panels – and not only when it comes to colour and materials.

Index is open thinking personified. Add to it. Subtract from it. Move it. Change it. All with no tools other than your own two hands.

Painstaking attention to detail completes the picture of Index – from the brilliant shelf bracket to the elegant impression of the light fixtures.

FREEDOM OF TIME AND SPACE

Needs in libraries and public environments have governed the development of Index – needs that are never static but evolve with temporal and spatial change.

The result: Index is designed as an open system that always fulfills its practical and aesthetic vision.

The common denominator for all combinations is the shelf and the upright panel in steel.

The slender front edges of the shelves give a light and airy impression, while sturdy profile construction makes for substantial durability and stability.

Index can be combined both as single and double sections.

The basic interior (shelf, upright panel and back) is available in black, white or light grey lacquer.

The end panels are built up of magnetic end panel fillings that further enhance the flexibility you'll find in Index.

Easy to exchange, easy to combine freely.

What personality do you want to give Index? Scaled down simplicity with front edges in frosted aluminium? Or the soft feeling of wood with front edges in oak? By combining the two different front edges with the end panels' multifaceted possibilities in colour and materials, Index offers almost infinite forms for expression in any environment.

3. The narrow front edge on the shelf creates a light impression and showcases the media. The invisible bent profile provides an extremely stable and robust construction.

4. Quickly and easily convert a standard shelf into a rack for periodicals. Reverse the shelf and mount it on a tilt. All done!

5. The Index system features a host of accessories and storage solutions for different types of media and displays.

1. The small bracket that supports the Index shelf is actually worthy of a thesis of its own. But to summarize: it hardly gets any easier to change or adjust a shelf. No tools needed. And the same

bracket is used for all types of shelf arrangements and applications.

2. Nothing is left to chance. The adjustable feet are specially designed for Index.

A basic principle for Eurobib is to enable each shelving system to be developed and modified. And equally important is continuity – to offer add-on components and accessories for our furniture series for years to come.

Index dimensions: Shelf width 750/1000 mm. Shelf depth 225/265 mm. Height (excl. frame and foot) 900/1200/1500/1800/2100 mm.

A strong idea always opens up new solutions.

You can clearly see this in Index, where the expression of design easily translates into new functions. The Index study table is based on the same design concept as the shelving. With the same elegant feeling, the same flexibility and the same possibilities.

Index is based on new, challenging ideas. Its lighting is no exception. The vertical fixtures cover the entire bookcase, not just the top shelves.

M I N D O F P O S S I B I L I T I E S

A good table should handle a multitude of tasks and environments – this was the starting point for Björn Dahlström when he developed Index study tables.

The tables are available in two designs with end panel profiles in aluminium or oak. The pie shaped table module also enables you to create exciting and efficient combinations.

The pie shaped table modules offer possibilities for building islands or beautifully twisting long tables.

Index study table with high end panel module. Upright panel profile in aluminium or oak. Available both as starter and add-on sections. Index dimensions: W1090 x D865 x H965 mm Working height: 720 mm.

EXPRESSIONS OF AN OPEN MIND

The designer

Björn Dahlström has won a number of Swedish and international design awards. He taught at Beckman's School of Design and served as a professor at the University College of Arts, Crafts and Design in Stockholm. "An important factor in developing Index has been ensuring that the customer's choice of interior will continue to meet future needs. Meticulously planned functions for displaying and storing various media are a top priority. New media are constantly being developed at the same time that caring for public space and its aesthetics are growing in importance."
