

Opal is available as standard in four heights, three depths and three module widths. The dimensions are shown on the back page.

BCI's wide range of shelves, cabinets and drawers can also be used with Opal.

The Opal Furniture Concept also includes signs, study and computer desks, and lighting accessories.

Height, cm *	122	152	182	212
Depth, cm				
25				
30				
40				

* The specified height includes feet but excludes top shelf and lighting accessory.

The module width of the shelving system is 90 cm. The most frequently used components also come in width of 75 cm and 100 cm.

Design: Bernt

The Opal Shelving System has several quite unique features. Despite its prominent characteristics, it has been designed in such a way as to allow its idiom to match other types of furniture and different surroundings. For instance it is possible to use different solutions for the end panels – in glass, steel, or wood – intermediate walls and top shelves – in steel or wood with or without signage profile – as well as integrated lighting. In addition, the steel end panel features a slit to allow integration of signs.

The shelving system consists of a starter module and a number of add-on modules – available in both single and double-sided versions. The angled tension supports ensure the structural stability of the shelving system. The angled tension supports may be replaced by intermediate panels.

Opal's end panels can be fitted on an existing frame. This ensures increased flexibility in the form of easy fitting onto existing configurations, or replacement of existing end panels.
